

# H.A.T Hamandishan Avian Tak Co.

## **Introduction:**

Hamandishan-Avian-Tak (HAT) Company was established in 2016. It is a technology company where located in Isfahan Scientific and Technology Town (ISTT). This company is supported by studies results during three decades which achieved in the Agricultural Research, Education and Extension Organization (AREEO). In order to commercialize technology products. The initial goal and main focus of research and development (R&D) group of the company is to promote the quality and innovation in livestock, poultry and bee products and also aquatic animals regards to indigenous and domestic genetic resources in order to develop the knowledge-based of these valuable resources.

## **Products:**

### **Egg enriched with folic acid:**

This kind of enriched egg was commercially introduced to the Iranian market by H.A.T Company for the first time. The folate content in this egg is the natural type (5-methyl tetrahydrofolate) with 2 to 4 times more than ordinary eggs. This valuable food resource is available and cheap, and also useful for all age groups, especially pregnant women, children and cardiovascular patients that can provide the required daily folate with availability of more than 95% without any side effects (tablets Folic acid).

### **Meat and Egg of indigenous hens:**

The Company according to its scientific researchers and extensive studies on the potential production and quality of native poultry products has presented a project entitled "value chain plan in the development and breeding of native chickens." We are proud to offer enriched and healthy local meat and eggs, to the consumer market for the first time with a special brand along with Veterinary Organization license. In addition, these products are produced in completely hygienic conditions that confirmed by relative organizations.

### **Leech survival and transportation environment:**

In parallel with the development and promotion of traditional medicine and the growing popularity of people with ancient medicine, the company's specialists in order to promote personal health and safety for the first time in the leech industry has succeeded in producing a biological bed and special environment for leeches. This bed and survival environment, by using special and biological technology, has provided the possibility of preserving and keeping the leeches alive for several months in sterile conditions and has a patent certificate. We are proud to be the first and only collection that is able to offer certified medical leeches and sealed packaging with the ability to survive long in the country. Certainly, this technology will be a step towards the growth and safety of medical leeches in the field of community health, as well as the preservation, reproduction and export of valuable species of Iranian leeches.
